TERMS AND CONDITIONS

Terms.....Net 30 days

Credit Cards: Visa, Master Card, Discover & American Express

SHIPPING

All shipments are F.O.B. shipping point. Shipping charges will be charged on all invoices when applicable. All shipping UPS ground service (unless otherwise requested by customer). Shipments of size and weight, that do not meet UPS guidelines, will be handled by freight line transportation.

Please Note: *Carriers are responsible for losses and all damages to shipped products.* Acceptance of a shipment as delivered is your acknowledgment that the shipment was received in good condition. In case of visible damage, do not sign for shipment or accept shipment unless the delivering agent notes the nature and extent of the damages. Then notify the delivering carrier and file claim for damages at once. If you find concealed damages, follow the same procedure of contacting the delivering carrier. Claims for damage visible or concealed cannot be filed by us. Any shortages in shipment must be reported by Purchasing and/or Receiving Department within 10 days of delivery.

RETURNED ITEMS

No material will be accepted for credit without prior approval. Please call for an RGA (Return Goods Authorization) number. Items must be returned in good condition, i.e., not used, damaged or altered. For any item returned and, upon inspection, determined to have been used, altered or damaged, the customer will be contacted before settlement. Returns are subject to the manufacturer's restocking charge where applicable. Custom-made products are not returnable. All returns should be made within 30 days after receipt of order. No C.O.D.'s accepted. **No cash refunds**. Credits are issued against future orders. Any and all credits will be voided if not used within one year of invoice date.

TAXES

We charge sales tax in: AL, CA, FL, KY, IL, LA, MD, NC, NV, NY, & TX.

It will be the customers responsibility to supply tax exemption information via fax or mail.

PRICES SUBJECT TO CHANGE WITHOUT NOTICE

MINIMUM ORDER

$30.00 (orders under that amount will have a $15.00 handling charge added to invoice.)

LIMITED WARRANTY

VIP, Inc. assumes no liability for consequential damages of any kind. Upon acceptance of products, customer assumes liability for all direct or indirect results and consequences of the use or misuse of any product by anyone. This warranty is expressly in lieu of all other warranties, guarantees, obligations, or liabilities expressed or implied by VIP, Inc. or representatives, with all statutory/implied warranties, other than title, hereby negated and excluded.

INTERNATIONAL ORDERS

Documentation and special shipping charges applied to purchase order originating outside the United States. All payment should be made in U.S. dollars. All orders are quoted and prepaid, via bank wire or credit card and shipping charges are freight collect.

Safety/Comfort Mats

ERGO MAT™

1/8" non-skid corrugated surface adds safety to work station areas.
3/8" buoyant sponge underside provides maximum anti-fatigue relief.
Permanent lamination of materials for extended service life.
1/2" overall thickness provides deluxe comfort for tough industrial applications.
Beveled edges on all four sides reduce tripping hazards.
Color: Black

** Not guaranteed against spiked heels or stool legs.*

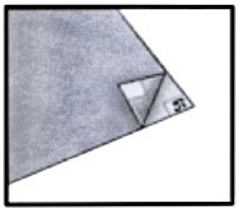
Catalog #EM-474-3-5 3' x 5'

COMFORT-EZE™

Offers fatigue relief for the person who stands all day

Molded single piece construction is tough and durable; withstands abuse.
Resilient rubber compound provides superb cushioning to relieve fatigue.
Uniquely engineered 5/16" knob pattern allows air to circulate beneath feet.
Double sided design extends the service life of the mat.
Safety edges are beveled on all four sides for extra safety.
3/8" thick; Color is black.

Catalog #447-30-10 30" x 10'



FRAMELESS TACKY MATS

Blue tear-off sheets

These low-profile mats are made up of layers of adhesive-coated sheets. Each sheet has a non-leeching, non toxic, FDA compliant antimicrobial agent that inhibits the growth of bacteria, mold, and mildew for the most effective contamination control offered. When the top sheet gets dirty, simply pull the numbered corner tab to remove it and expose the next clean sheet. For indoor use only.

SaniZide Plus™
Germicidal Solution

If it's safe enough for two-year-old Brandon. . .

SaniZide Plus is a Quaternary ammonium compound formulated for use as a broad spectrum disinfectant deodorizer on environmental surfaces. Premixed and easy to use, let SaniZide Plus help you comply with the OSHA Bloodborne Pathogens Standard which requires the use of an "appropriate disinfectant" that is tuberculocidal and virucidal against HIV-1.

- Ready-to-use hospital grade disinfectant
- Kills HIV and TB
- Virucidal, Tuberculocidal, Fungicidal, Bactericidal
- Controls mold/mildew
- Neutralizes odors and freshens in one step
- Helps prevent cross contamination
- EPA registered

Catalog #422-3691
SaniZide Plus Disinfectant • 32 oz. Trigger Sprayer

DisCide ULTRA — Palmero Surface Disinfectant

Effectively kills HBV, MRSA, VRE, HIV-1 (AIDS virus), herpes, adenovirus, staphylococcus aureus, pseudomonas, salmonella, E. coli and is fungicidal in one minute! DisCide ULTRA is also tuberculocidal. DisCide ULTRA is the solution to all your infection control problems, combining a powerful formula that kills effectively and quickly.

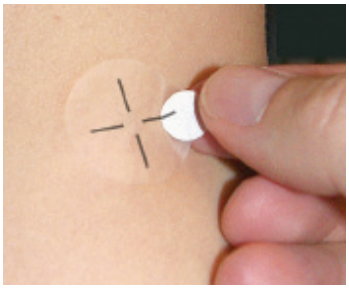
CL-30—3.0mm semi-lucent line—packaged with 165 cm per box

PM-400 PM-425 PM-450 PM-475



The newest members of the PortalMark™ label family offer additonal options for delineating radiation treatment areas. Their premium medical grade adhesive is hypo-allergenic and latex-free, resulting in less irritation for the patient. Constructed of waterproof, yet breathable material for maximum performance and comfort, PortalMarks hold strong for up to two weeks. Our unique Suregrip™ applicator discs ensure easy and accurate placement without contaminating the adhesive.
Packaged with 110 labels per box.

*PM-400 Series uses an alternate material and adhesion for more humid environments and particular skin surfaces.

VISION LINE™ Series

Vision Line™ products offer the perfect combination of tack surfaces and easy-peel corners, keeping the markers correctly positioned with minimal discomfort to the patient upon removal.
These specially formulated NON-METALLIC markers are clearly detectable on film, reducing read time.
Visionmark™ CT markers are clear and consistent with virtually no scatter.
Our patent pending Vision Line™ products are safer for you, your patients and the environment.

CT-Mark™ and CT-Line™

The CT-Mark™ and CT-Line™ have been created specifically for CT imaging. This specially formulated NON-METALLIC material is the result of years of research and development, resulting in a virtually scatter-free opaque marker that is perfect for nearly all CT marking applications.

Markers and Accessories

Relief Tabs™

SL-15RT

SL-20RT

SL-25RT

Give your patients some relief with Suremark's new Relief Tabs™. The unique adhesive-free center won't stick to sensitive areas of the skin. Available in 1.5mm and 2.0mm and 2.5mm ball sizes. Packaged with 110 markers per box.

Storage Box

This convenient box holder provides a permanent visible storage area for your Suremark X-ray Skin Marker boxes. Holds five or ten standard boxes or two R and L boxes. Place on a desktop or mount to a wall or imaging machine.

BH-5 *Holds five boxes*

BH-10 *Holds ten boxes*

Double Sided Foam Tape

These reusable ½" x 1" double sided tape strips are ideal for fastening film markers to cassettes. Packaged with 110 strips per box.
SL-DT1

Suremark®

SL-10 SL-12 SL-15 SL-18 SL-20 SL-25

The most common style for general use, Suremark 1.0mm, 1.2mm, 1.5mm, 1.8mm, 2.0mm and 2.5mm labels are perfect for distinguishing between a nipple shadow and a lesion, thereby reducing costly repeat examinations. Packaged with 110 markers per box.

Powermark™

SL-30 SL-40 SL-50

This design maintains all of the advantages of our regular Suremark labels, with larger lead ball sizes for visibility in radiation therapy. Available in 3.0mm, 4.0mm, and 5.0mm ball sizes. Packaged with 50 markers per box.

Suremark® Tabs™

This design maintains all of the advantages of our regular Suremark® labels, with the added benefit of a "tabbed" feature that enables natural and conforming placement on more prominent nipples or where more skin contact is preferred. Available in both 1.5mm, 2.0mm and 2.5mm ball sizes. Packaged with 110 markers per box.

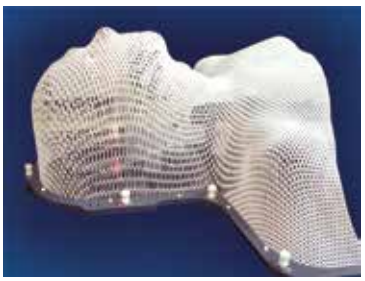
Thermoplastic Markers



Theramark™ markers stay securely where you put them throughout the entire treatment process. They are repositionable during the initial set up, giving you time to get the markers in just the right spot. The adhesive bonds stronger as time goes on. Theramarks adhere directly to immobillization masks without having to use tape.
Only for use on immobilization masks.
Not medical grade adhesive.
Adhesive made with natural rubber latex.

Packaged with 110 markers per box.

ReliaMed™ ADHESIVE REMOVER WIPES

ReliaMed™ Adhesive Remover Wipes are excellent for removing paint marks from Deco Pens. In the event that lines need to be changed, the lines can be removed quite easily (without any unnecessary scrubbing). Adhesive Remover Wipes do leave a slightly oily residue after removing the pre-existing lines. We strongly recommend that you clean the area gently with a little alcohol before remarking.

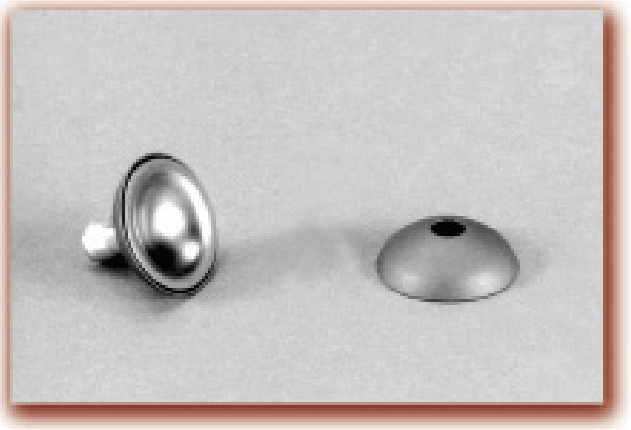
TUNGSTEN EYE SHIELDS

2 and 3 mm Thick



The Tungsten Eye Shield can use either a 0.5mm or 1mm thick anodized aluminum cap (both are included). The cap reduces electron backscatter to the eye lid. The eye shield can be used without the aluminum cap when treating superficial. The entrance dose rate will determine whether you use a 1mm or 0.5mm aluminum cap.

Example
The surface dose on a particular accelerator is 72% for a 6 MeV with 80% at the inner surface of the 3mm thick eyelid which is a 20% dose deficit. Using an eye shield consisting of 3mm of tungsten and 1mm of aluminum, there is a 29% increase in dose at the surface of the shields aluminum cap due to backscatter. This gives a total dose of 109% at the inner surface of the eyelid and 101% at the outer surface of a 3mm thick eyelid.

Specifications
Tungsten Density: 17 g/cm^3
Aluminum Density: 2.718 g/cm^3

	TRANSMISSION Using XV-2 Film		BACKSCATTER Using TLDs	
	6 MeV	9 MeV	6 MeV	9 MeV

Eyeshield Sterilization Tray

Consists of Base, Lid, and Mat

Trays can be sterilized by all standard methods of sterilization (autoclave, steam, dry heat and chemical). Trays are molded from General Electric's ULTEM® resin, using mold flow analysis to guarantee product strength, structural integrity and extended life cycle. Flexibility of layout with finger-tip mat inserts to protect instruments. Trays are stackable. Integral feet in bases and corner ridges on lids allow for easier handling in autoclaves and storage. All bases have pebble-type surface to keep mats from sticking. 2.5" x 6.0" x 1.25"

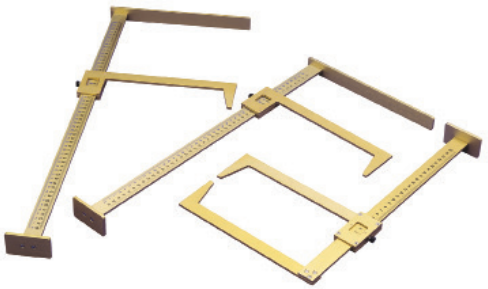
EASY TO READ ACCURATE MEASUREMENTS FROM THE TABLE TOP TO PATIENT'S SURFACE



BODY CALIPERS

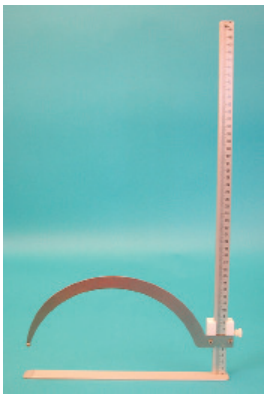
MANUFACTURING DATA:

- Precision machined anodized aluminum.
- Components hand tapped, counter bored and assembled with steel screws for strength, stability and durability. Unlike rivets used in some products - steel screws may be re-tightened.
- Easy-to-read screen printed scale is protected from wear by a recessed sliding scale indicator.
- Knurled thumbscrew positioner firmly grips the smooth operating slide at any site on scale.

APPLICATION FEATURES:

- Can be utilized for table top distances to determine central-axis and off-axis measurement . . . wide base guarantees perpendicularity.
- Reversing caliper orientation assists in determining separations such as laterals, obliques and off-table measurements.
- Scale color coding on both sides of Standard Body Calipers and Extended Body Calipers eliminates confusion with scale orientation.
- Scale resolution defined into one millimeter increments.
- Eliminates dosage variations of up to 4 percent.
- Pointer(s) easily reach around extended body contours.

CATALOG#	DESCRIPTION
VIP-95	Standard Body Caliper (45 cm)
VIP-96	Extended Body Caliper (55 cm)
VIP-97	Head & Neck Caliper (25cm)



CURVED BLADE BODY CALIPERS

This lighweight precision Curved Blade Body Caliper has one scale and a non-removable slider which prevents errors caused by reading the wrong scale on a dual scale caliper. The slider can be locked at any position. The rigid leg that slips under the patient is 1/8" thick and 11" long.

DIGITAL LEVEL

This digital level is an ideal product to accurately measure the 0.0° to 90.0° angles. This level can assist in set-ups and treatment of patients that require such items as: tilt boards, cassette holders, breast squeeze, treatment tables, gantry angles, and head and neck immobilizers. It is lightweight and only 9" long.

Features include:

- **Angle-Reading Capability**
  Reads all angles — not just level and plumb.
- **Recalibration**
  There are two ways to recalibrate Smart Tool.
- **Display**
  Liquid crystal display can be read from the side and up to 10 feet away. Display even flips over with the level so it always reads "right side up."
- **Accuracy**
  Smart Tool allows you to choose between two levels of accuracy: 0.1° and 0.2°.
- **Module**
  The "brain" that powers Smart Tool is a rugged, solid-state sensor sealed inside a weather-resistant polycarbonate module. It has no moving parts or vial to break.
- **Battery**
  Smart Tool uses a standard 9-volt battery with a life of 300-400 hours. It will give a "low battery" message on the display when it's time for a replacement, and it shuts itself off after five minutes if not used.
- **Maintenance**
  Clean with water by rinsing, spraying or wiping with a wet cloth. Do not clean plastic parts with solvents.

Catalog #VIP-192 Smart Tool

One-year limited warranty. See owner's manual for details.

POCKET LEVEL

The pen-size, 12 cm Pocket Level comes in a hexagonal aluminum case. The bottom surface is perfectly flat for accurate surface leveling. A large easy to read glass vial is mounted in an anodized hexagonal tube with a black plastic clip.

Item #	Description
352-112	**12 cm Pocket Level with Clip**

MAGNETIC GANTRY LEVEL WITH GLOW-VIEW

The easy viewing Magnetic Gantry Level is 9" long with three lined vials (plumb, level and 45°) with "Glow-View." It is made of tough shock resistant material. The base utilizes a strong magnetic strip that secures to iron and steel surfaces.

Item #	Description
VIP-A67	**Magnetic Gantry Level**

LUBRICATING JELLY

Sterile n Convenient n Disposable

A crystal clear, sterile, greaseless, water soluble, non-stainable jelly packaged in hermetically sealed foil laminated pouches. Harmless to rubber and plastics.

Catalog #VIP-A4332 144 mini packets per box

VAGINAL - RECTAL MARKER

Vaginal - Rectal - External: Position and magnification can be determined accurately by counting the lead balls which are spaced 1 cm apart. This marker can be placed on top or inside of the patient and used with adjustable external locator during simulation or port filming on treatment machines. Sterilization by gas.

SPECIFICATIONS:

• 5/16" diameter x 30 cm flexible tubing • 3/16" diameter lead balls spaced every cm
• Adjustable stainless steel external locator
Catalog #VIP-132

CT RECTAL MARKER

Rectal • Vaginal • External

The NON-METALLIC CT Rectal Marker is a flexible tube packed with teflon balls spaced at 1 cm intervals from center to center. The Rectal Marker is used to accurately obtain both the rectum position and magnification by counting the balls. This determines the rectum location relative to the radiation field. An adjustable anus marker can be utilized during CT simulation.
The Rectal Marker can be used in the vagina or as an external marker.

SPECIFICATIONS:

Sterilization: Gas; Tubing: 5/16" (8 mm) dia. x 30 cm flexible
Balls: 3/16" (5 mm) dia. spaced every cm; Anus Locator: Adjustable delrin
Catalog# 460-010

VAGINAL DEPTH SCALE w/INTROITUS MARKER

The Vaginal Depth Scale can be used during simulation or port filming on treatment machines. Position and magnification can be determined accurately by counting the lead balls which are spaced 1 cm apart. An Introitus Marker is included which can be positioned and then locked to the scale with a nylon thumb screw. The Introitus Marker (Model 707-010) is also sold separately.

SPECIFICATIONS:

Acrylic Rod: 16 mm dia. x 26 cm; Lead Balls: 3/16" spaced every cm; Scale Length: 15 cm
Catalog #707-000

CT VAGINAL DEPTH SCALE

This NON-METALLIC CT Vaginal Depth Scale is 1.6 cm in diameter and 26 cm long and has teflon balls which are spaced 1 cm apart and are 5 mm diameter. An introitus marker is included with the 1.6 cm diameter vaginal scale. A thumb screw holds the introitus marker in position.

SPECIFICATIONS:

Material: Acrylic; Density: 1.1859 g/cm3, Scale Length: 15 cm

Catalog #707-145

VAGINAL DEPTH SCALE HOLDER

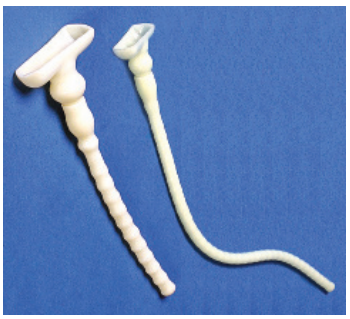
This holder has a swivel/angling joint that slides up/down on the base plate post. This allows the Vaginal Depth Scale to be adjusted and held at the proper angle. The heavy steel base has a nickel chrome finish. The Vaginal Depth Scale must be bought separately.

Catalog #707-020

SHADOWFORM Radiopaque rectal and vaginal markers

ShadowForm rectal and vaginal markers are a sanitary and convenient means of localizing and documenting the exact location of anatomical structures when planning radiation treatment of the pelvic area. They assist the radiation oncologist in developing a specific treatment program that accounts for the location of tissues in the rectum, sigmoid and cervix.

Suitable for use with both port films and the low-energy beams found in simulation rooms. ShadowForm markers are made from a soft, smooth and flexible barium-impregnated polymer that provides the greatest possible patient comfort. They also are individually packaged and disposable—eliminating the potential for cross-contamination.



SHADOWFORM RECTAL MARKERS

Available in 10 cm and 35 cm lengths, these tubes are ribbed at 1 cm intervals to provide a convenient reference when compensation for film magnification. A detachable T-bar handle is provided as an external anchor, and an open distal end permits the marker to function as part of a barium delivery system.

CATALOG #	DESCRIPTION	UNITS PER CASE
VIP-1710	10 cm Rectal Marker with T-Bar Handle	10
VIP-1740	35 cm Rectal Marker with T-Bar Handle	10

Provided as an 18 cm tube, these markers may be trimmed to any desired length.

SHADOWFORM VAGINAL MARKER

The detachable T-bar handle acts as an external anchor, and can be used to position a 10 cm, ribbed rectal marker inside of the vaginal marker whenever a reference for compensating film magnification is required.

CATALOG #	DESCRIPTION	UNITS PER CASE
VIP-1735	18 cm Vaginal Marker with T-Bar Handle	10

TESTICLE SHIELDS

These lead shields, available in three sizes, are designed to eliminate or reduce scatter radiation to the testicles. The sections of the shield are secured with two silicone rubber straps supplied with each unit. The halves may be secured with standard tape.

SPECIFICATIONS:

* Each unit is cast to provide a lead wall thickness of ½" (1.27 cm).
* A 90° open sector is provided in each shield to allow narrow but comfortable attachment to the patient.
* Lugs cast into each half of the shield unit provide anchor points for the two silicone rubber straps used to hold the unit together.
* All surfaces of the shields are painted with a blue-colored epoxy to reduce lead exposure to both the patient and therapist.

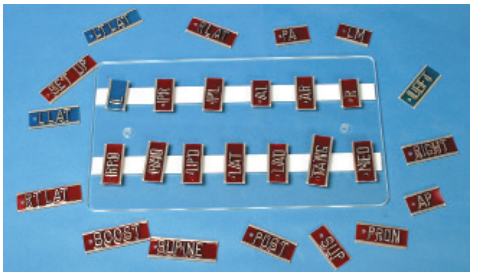
LEAD LETTERS/NUMBERS

Large ¼" thick x ¾" high lead letters/numbers are mounted on plastic and sealed with epoxy sealant. Each piece has a pre-drilled hole for choice of mounting to shoulder hooks, OR affixed to Velcro® for ease of mounting and remounting to your storage board and/or film cassette. When ordering, PLEASE specify the shoulder hook style or Velcro style mounting.

These lead pieces are ***virtually unbreakable***. However, if one should break, return the item and it will be replaced.

SPECIAL ORDERS AVAILABLE:

* Choice of letters and/or numbers, i.e., SETUP, CLINAC-20, etc.
* Personalized with initials, i.e., L TC, R TC, L MKV, R MKV, etc.



SIMULATOR - ACCELERATOR ROOM

VIP-79-1	One (1) Letter
VIP-79-2	Two (2) Letters
VIP-79-3	Three (3) Letters
VIP-79-4	Four (4) Letters
VIP-79-5	Complete Set of 13

Set includes the following abbreviated letters: **L** (left), **R** (right), **AR** (anterior right), **PR** (posterior right), **AL** (anterior left), **PL** (posterior left), **LAO** (left anterior oblique), **LPO** (left posterior oblique), **RAO** (right anterior oblique), **RPO** (right posterior oblique), **MED** (medial), **LAT** (lateral), **TANG** (tangential).

STORAGE BOARD

Store your lead letters/numbers on this attractive clear acrylic board that can be wall mounted near your work area. Each board has two strips of Velcro or 16 shoulder hooks with space enough to mount a full set of lead pieces.

Size: 7"h x 16"w x ¼" with predrilled ¼" holes for mounting.

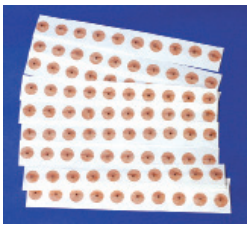
LEAD MARKERS



These easy to use lead markers are composed of rounded 2mm lead, encapsulated in plastic with a soft, self-sticking, peel-off backing. Excellent for identifying, localizing anatomical structures, or used as a magnification factor with the non-stick side next to the skin.

Catalog #LNA-20 100/pkg

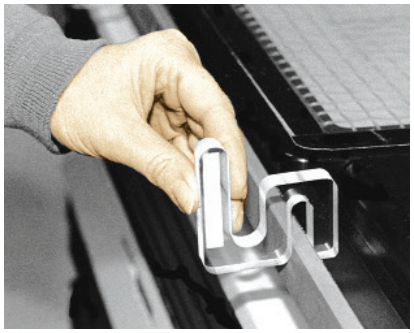
S-TYPE PORTAL CASSETTE GRIPS

Constructed of ½" thick aluminum. ½" x 1¼" spacing for rail grip, 13/16" x 3½" cassette allowance and ¼" — 20 bolts with lock nuts. Virtually indestructable.

Catalog #VIP-174

The ¼" bolts, with or without the lock nuts, will allow the proper adjustments for cassettes or cardboard film holders.

SMALLER S-TYPE PORTAL "POCKET CASSETTE HOLDER" GRIP SET



This newly patented polycarbonated material S-Type cassette grips easily to your treatment couch rails. The set is small enough to carry around in your lab coat pocket, yet strong enough to hold your cassette upright for lateral ports.

½" thick, 2 9/16" x 2 9/16" in size and weighs 2.5 oz.

Catalog #VIP-175

See page 29
for the
AAP System

ARM & SHOULDER EXTENSION STRAPS

Used for extending the patient's shoulders down and out of the treatment field for head and neck technique. Place straps around patient's wrists and pull each strap length down and under his/her feet. You can control the amount of tension needed for best results.
Fabricated with blue velvet nylon strapping and velcro-like fastening system. Measures 50" long with 14" wrist straps.

Catalog #VIP-43

SHOULDER RETRACTOR

Used for extending the patient's shoulders down and out of the treatment field for head and neck technique. For those patients who need the extra sturdiness, this right angle polycarbonate frame is the perfect item. Straps with Velcro® fasteners are placed around patient's wrists, then a nylon rope keeps tension on the shoulders with a self-locking bracket. A tension spring in the rope line keeps the tension on the shoulders without "over strain." Releasing the tension is done by simply pulling ropes laterally away from the patient.

PRONE FACE POSITIONER II

This set may be used similar to the PRONE PILLO POSITIONER. The complete set includes a total of three (3) positioners. One (1) straight face positioner (9" square x 4.5" high), one (1) 20° cervical/flexion face piece (12" square by 4.25" and 2.75" high) and one (1) chest angle support positioner (8" w x 18" L x 2.5" and 1" H). This system is very helpful for patients that need prone positioning. Excellent for treatment of medulloblastoma, occipital fields, pa spines, pelvic and hips. The face pieces are constructed of semi-rigid foam material. May be used as a disposable/permanent item(s). For face protection, the Duncan disposable sheets or disposable plastic shower caps may be used. Shower caps are used by placing them over the foam piece(s) and making a small split in the center for patient breathing. The angled sponge is covered with microvent material. (See page 14C for information). Can be used with or without the foam pieces depending on the circumstances of patient positioning.

Easy to position and re-position ■ Comfortable contour face rest ■ May be used with or without chest angle support
Immediate visual check ■ Cut-out for "easy-to-see" anatomical structure ■ Adequate breathing space.

Prone Face Positioner II can be used six (6) ways:

- straight face piece with or without chest support piece.
- 20° face piece in cervical flexion with or without chest support piece.
- 20° face piece in cervical extension with or without chest support piece.

ATTENUATE ARMS POSITIONER™

Patent Pending

For patients required to lay in a supine position with their arms positioned above their head, feeling comfortable is almost an impossibility. That is—until now.

This arm(s) positioner, called the “ATTENUATE ARMS POSITIONER," offers improvements over similar products. It's constructed of high density foam—soft, yet firm. A polyethylene material supports the base and maintains rigidity (with handle). Head and neck supports attach to the base for reproducible positioning.

Patients may be positioned with proper head support, arms extended above their head and placed onto the foam positioner. A slightly elevated angle allows the arms to rest, with an additional angle for the wrist area. Patients have a choice: to hold onto a soft "Grip Ring" or just relax.

This positioner is excellent for esophagus, chest, pancreas, ribs, and breast treatment technique. The patient can be set-up and treated in a fixed position throughout the treatment course. Excellent for oblique and lateral technique. It is also helpful for any treatment technique which requires the patient to have only one arm in the extended position.

Dimensions: 20" wide and 9.5" high

Can easily be placed into the opening of the Computed Tomography diagnostic unit. Dosimetry can benefit by confirming their patient treatment plan(s), and there is no metal component.

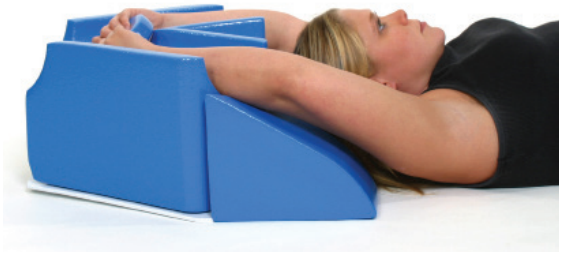
Extended position.

Looks Good

Feels Good

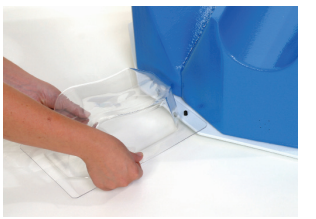
Works Good

Washable vinyl covering.



This accessory provides added support to the humerous (upper limb) portion of the patient's arm(s). May be attached to the Positioner via Velcro fasteners. Available in blue vinyl spray protective coating.

A handle is constructed in the polyethylene base for ease of handling and to store on counter or wall hanging.



A set of six (6) head and neck positions attach easily onto the two (2) pegs.

VIP-63VC	**Attenuate Arms Positioner, Blue Vinyl Coated** *(One set of Head Supports and Grip Ring included)*
VIP-63AC-V	**AAP Arm Support, Blue Vinyl Coated**

VIP-182	**Medium Grip Ring**

Abduce Knee Positioner Set

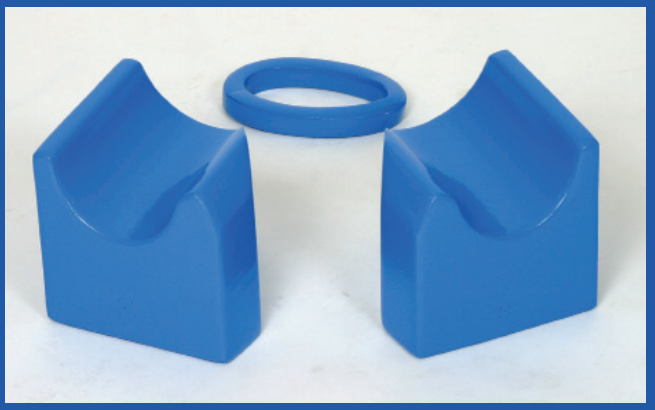
Includes two Foam Positioners and one Grip Ring (VIP-183)

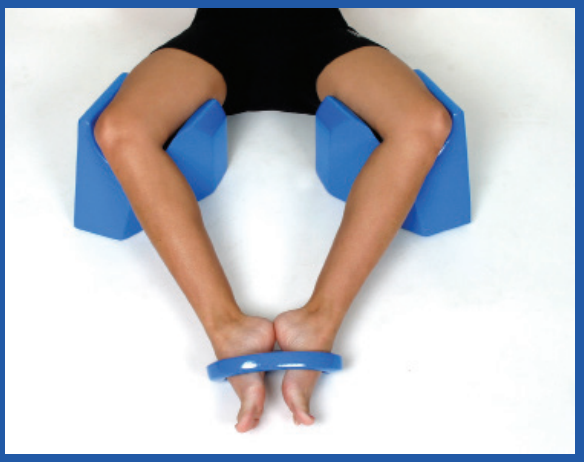
The purpose of this product is to arrange patients in an abduction pelvic position with maximum comfort.

This blue vinyl coated semi-firm sponge can be very useful for a treatment setting of the entire pelvis, single hip, and vulva/scrotum area.

Place the sponge(s) under the femur/knee area with the lower side of the sponge, a 10^0 slant toward the patient's trunk. The knee(s) are seated into the sponge's concave area.

The patient's feet can be held together with the support of the vinyl coated grip ring.





Where comfort and positioning are important

Excellent for hip/femur positioning

VIP-300 **Abduce Knee Positioner**
Includes 2 Foam Positioners and 1 Grip Ring (VIP-183)
VIP-183 **Large Grip Ring**

PRON-PILLO®

A molded soft foam positioning device designed to provide maximum comfort for the patient when lying in the prone position. The unique feature of Pron-Pillo is its ability to support both head and shoulders to assure a comfortable position for the neck.

Eliminates use of conventional pillows and additional time involved in placing your patient in a comfortable prone position. Raised base allows patient to breathe freely while enjoying a relaxed prone position.

PRON-PILLO **CATALOG #FFF306**

BELLI-BOARD

A Belly Board is used to allow the intestinal tract to drop out of the treatment field. Treatment through the foam material has a low absorption of the beam. This unit is made of lightweight, no-breakable high density foam and is coated with a durable blue finish for easy cleaning. The light weight allows for easy handling of the Belly Board. The soft flexible surface provides patient comfort and helps retain excellent body positioning. The bottom surface is anti-skid on treatment and simulator couch-es. The Belly Board includes one opening reducer that when placed in the opening makes the size of the opening smaller. When the EXACT ENHANCE BAR is attached to the Belly Board with THE GLUE DOTS, the belly board can then be indexed using a Lock-Bar or a similar bar. This will allow positioning the belly board in the same position daily.

Cleaning Instructions: Soap and water, 50/50 Bleach/Water or an ammonia solution can be used.
Additional Specification: Opening: 12 1/4” W x 13 3/8”L (31 x 34cm)
Blue Reducer: 11.8”W x 3.23”L x 7”T (30 x 8.2 x 17.8cm)

GRIP RINGS™ — A Comfortable Idea

Now you can give your patients that "extra something" to help them feel more comfortable. By using Grip Rings™ you offer patients something to make them feel more secure in an already stressful situation. Another benefit of using the Grips is that patients are more relaxed, and original set-up and treatment position techniques are easier to verify.

GUARANTEED FOR 90 DAYS

How is it Designed and Constructed?

The circular design of Grip Rings allows pressure to be evenly distributed, preventing harsh marks on the skin. The attractive and smooth outer skin becomes an integral part of the cushion through a high strength bond to the foam core. Only high tech, non-absorbing, closed cell cushing mediums are encapsulated to ensure the highest measure of quality. The outer skin of tough blue vinyl is smooth and easy to wipe clean with most anti-bacterial solutions, and free of surface textures that trap and hold bacteria from soil and body fluids. If the soft, supple outer skin is cut or torn, the inner cushion will not "sponge-up" liquids/fluids as some products that utilize conventional upholstery materials. Because of the smooth vinyl surface, the ring(s) can be placed over the patient's wrist (and removed) easily and quickly without causing additional trauma to the patient (such as cuts, burns, abrasions, or hair removal as when tape is used).

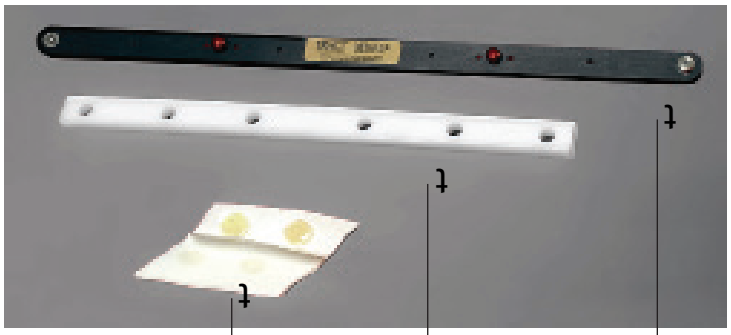
Exact Enhance Bar

assists in the setup of

VAC FIX, VAC-LOK™ ALPHA CRADLE® SUPPORTS

This product was designed to “ENHANCE” the EXACT BAR used with the Varian Accelerator Exact Treatment Couch. The EXACT BAR can be adapted to the vacuum bags and Alpha Cradle type of patient immobilization forms with the use of three self-adhesive Glue Dots.



Glue Dots Exact Enhance Bar Varian Exact Lok-Bar

May be used with any plastic Vac Bag system again and again because of easy removal.

Exact Enhance Bar	Catalog #EXC-EB-1

Varian Exact	Catalog #MT-VAR-20

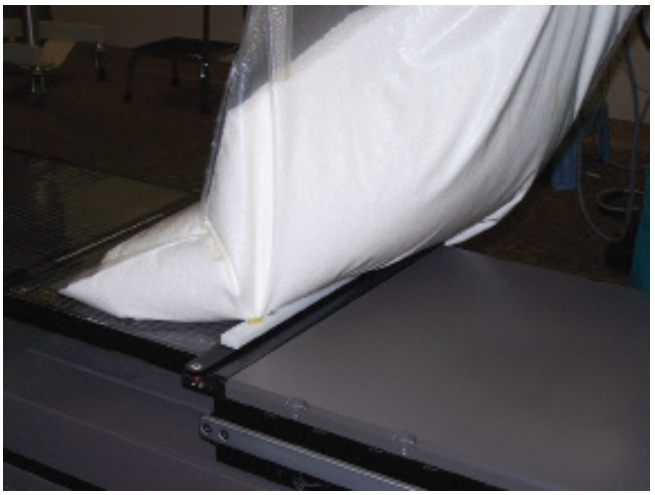
The Enhance Bar is made of high-density polyethylene material. Measurements are 1"W x 16"L and ½" in thickness. There are holes drilled. You have the choice of centering or shifting 2¾" in either direction, laterally.

- Consistent in accurate positioning
- Easier location of “Exact Bar” and vacuum bags/Alpha Cradle
- Replacement guarantee against chipping, breaking or warping

Seat your Varian Exact Lock-Bar or similar bar in a “notch” along the length of the couch/table top.

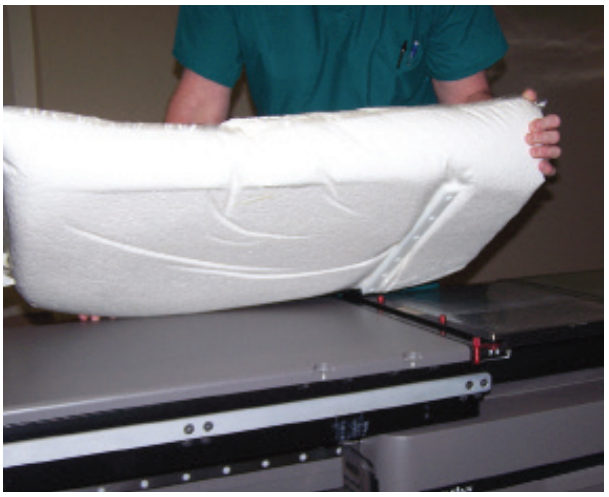
Place the Exact Enhance Bar onto the Loc-Bar, matching the “two pegs” or similar design unit.

Now use "Glue Dots" to adhere the Exact Enhance Bar to your immobilization form. Take two or three "Glue Dots" and press the open side into the Exact Enhance Bar (as shown). Remove the wax paper and repeat for each Glue Dot. (Do not touch with fingers.)



Place the patient immobilization form on top of the Bar/Glue Dots.

Position patient onto immobilization vacuum/mold to construct form.



Remove patient from completed form. The Exact Enhance Bar will be attached to the form and can be easily removed and reseated onto the Lok-Bar/ couch when needed.

The Exact Enhance Bar can be used repeatedly.
The Glue Dots are easily replaced by simply "rolling" them off the bar or form and discarding them.

Catalog#EXC-EB-1 Exact Enhance Bar

Easy to use, simply touch item to glue dot and lift. The Glue Dot will transfer to the item. Do not remove the Glue Dot with fingers.

Glue Dots are 1/2" round. Dots cannot be reused. Samples are available.

ELASTO-GEL . . .The stick-to Gel on purpose . . .

Materials are frequently used in high energy radiation therapy in order to deliver the prescribed dose to the patient's skin surface. Elasto-gel is easy to work with, reusable on the same patient, is mildly adhesive, and conforms exceptionally well to body contours. It may be easily cut with scissors to the desired size and shape. Standard backing is stretch cloth on one side and clear removable plastic on the other. The stretch backing may be removed by first moistening with a damp cloth and then peeling the cloth from the gel. Because of the self-adhesive nature of the gel pieces, they may be layered together for various thicknesses. Density 1.20 gm. Sample upon request.

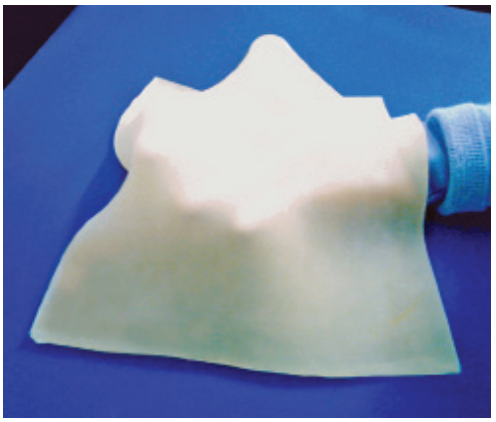
SUPERFLAB BOLUS MATERIAL

- For maximum dose built-up to skin
- Conforms well to patient's contour
- Very elastic and quite "FLABBY"
- Specific gravity: 1.02
- Maintains uniformity to thickness
- Can be washed
- Can be cut
- Approved for human contact
- Made of synthetic oil gel
- Will not dry out



The SUPERFLAB BOLUS MATERIAL is offered in thicknesses which provide maximum dose build-up for relevant photon energies. Since the material does not suffer inelastic strain from normal stresses, it does not have to be bagged or wrapped in plastic film to maintain its shape. At the option of the user, however, SUPERFLAB may be wrapped in disposable plastic film for cleanliness and use; or it may be washed with soap and water as needed, followed by an application of talcum powder or corn starch.

SUPER STUFF BOLUS MATERIALS

Super Stuff is one of the best materials to be used for bolus to date. Super Stuff comes in pink, blue, green and white powder form. One ounce of powder is packaged in a plastic bag with a black line on the bag to indicate the water fill line. (One cup of water is added to one ounce of powder). After mixing, by squeezing on the plastic bag, Super Stuff takes on the consistency of Jello. It can then be shaped to fit the contours of the patient. Long shelf life. Density: 1.02g/cm^3

ALGINATE IMPRESSION MATERIAL

A fast setting alginate impression material that is used to produce facial molds, dental and gum impressions. This fast setting material uses water as a base and when applied to a facial area or bite block, will produce an impression within 1–2 minutes.

Catalog #0485-001 1 lb. can

Catalog #VIP-79420 Spatula, plaster #11R

Catalog #VIP-H-00565 Flexibole, large 60^{CC}

SILKY ROCK

Yellow Microstone Catalog #6834-01996 25 lbs.

This material is used to produce solid patient facial molds post alginate impression material. Silky Rock powder, when mixed with regular tap water, forms a “rock-like” solid mold.

After hardening of the mold, thin sheets of lead can be placed onto the section/ treatment interest with a small hammer, and contoured into the shape needed.

Small rounded end instruments(s) can shape the smaller contoured areas such as the nose/eye. Small wooden dowels are sometimes used for this purpose by simply sanding the ends to a convex shape.

AQUAPLAST PELLETS

Soften these pellets quickly in hot water for easy shaping!
Fabricate custom bite blocks and bolus with these easy to mold pellets. Simply soften in hot water for less than 1 minute and contour—either directly against the skin or a plaster or dental stone mold. Produces a rigid, unbreakable mold, which can be repeatedly modified by reheating.

Catalog #RT-7001 1 lb.
Catalog #RT-7003 3 lbs.

When forming bite blocks, place the softened pellets in a small plastic bag prior to inserting in the mouth. (DO NOT PLACE SOFTENED PELLETS DIRECTLY INTO THE MOUTH). Once the mold is completed and cooled, remove the plastic bag.

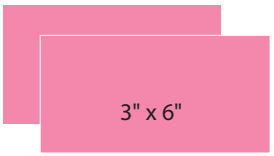
UTILITY WAX

This paraffin wax material is soft and pliable and can be molded into the smallest detailed configuration. It comes packaged in a box of 55 square rope strips (11" x 3/16" x 3/16") and is ready to use. Starting with one rope strip, and by adding rope to rope, you can construct the shape you need without having to mix or melt a material/chemical. The wax will maintain its shape as long as it isn't pressured out of shape.

Catalog #VIP-171 55 ropes/box white
Catalog #VIP-171R 55 ropes/box red

PINK DENTAL WAX

This wax may be used as bolus material, or used for coating eye shields. 1.6 mm thick.



Catalog #VIP-158 1 pound box

ALUWAX - IMPRESSIONAL WAX

MAKE A LASTING IMPRESSION . . . A simple, yet effective method to use with your BITE BLOCK HEAD AND NECK IMMOBILIZATION SYSTEM. This dental wax (gray in color) is easy to form by heating in a water bath (or your room faucet water) 90° to 155°F. The wax may be used in sheet strip form or rolled into a mass. After softened, place around the bite piece and into the patient's mouth. Setting time, 1–2 minutes. Sets hard—guaranteed you'll like it!

Catalog #VIP-163 25 sheets/box

REPROSIL

Mix according to instructions. Place on bite piece and insert into patient's mouth. Mixture will solidify in approximately 6-8 minutes. Bite piece may be placed in a small container with a diluted mouth wash for clean storage.

PLEXIGLAS BITE PIECES/TONGUE DEPRESSOR

This item can be used with or without a bite block head and neck immobilization system. The length of this bite block is 4cm longer than the average 9cm, making the total length 12.8cm.

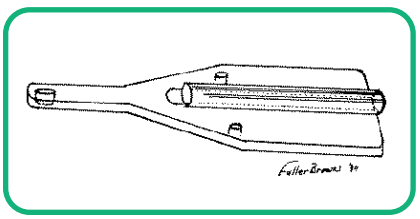
Aluwax or other molding material can be molded around the bite block and positioned in the usual manner. As the patient closes his/her mouth, the extended piece will force the tongue to stay in a lower position. Outline (parallel) of the treatment field can easily be identified by the bite block stem end, reassuring tongue depression.

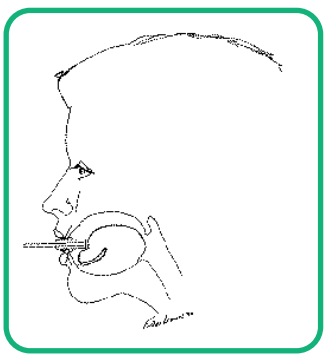
Features: A 4.5cm length with a .7cm i.d. plastic tube permitting free airway of patient breathing.

Another use: By wrapping gauze or other material around the bite block, it can be used as tongue depressor or an airway in an emergency situation.

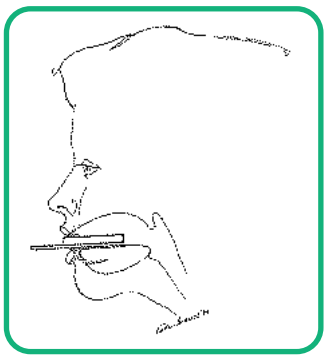
Can be cleaned and reused if gas sterilized.

VIP-52 (minimum order 6)





Using regular bite block



Using extended bite block

TOE INVERTER

You will find this product very useful when doing set-ups of the pelvis/extremities areas.
Excellent, consistent repositioning in daily treatments.

- Durable and lightweight ABS™ pyramid base
- Helps reduce motion
- Velcro closure straps are quick, easy and comfortable
- Keeps patients' feet inverted for true anatomical position

Catalog #TI-23 Toe Inverter

Place patient's feet onto the inverter.

Pull strapping up and over feet to Velcro fasten in place.

FEET IMMOBILIZER

If you want your patient's feet in an anatomically correct position, this product can help.

1) Simply place each foot against the upright flat section of the unit.
2) Slightly press the medial section of the patient's feet against the mid-upright divider.
3) Insert the one-wrap velcro through the milled out slots and secure both feet by overlapping the one-wrap over the patient's feet as illustrated.
4) We highly recommend using the polyethylene overboots (pictured below) for added sanitary protection.

Constructed of seven-layer birch 3/4" plywood and coated with polyurethane for protection and easy cleaning.
Overall dimensions: 11 1/2"W x 11 3/4"H x 6"D.

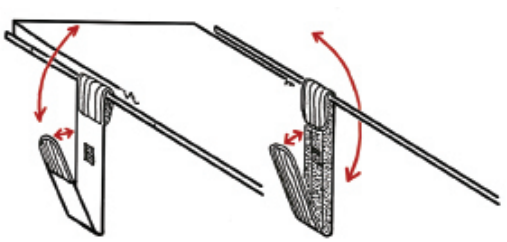
TABLE RAIL SAFETY STRAP

VIP's safety straps help to immobilize the patient during radiation treatment and prevent falling from the table. The straps are constructed of soft, yet strong blue velvet cloth material which is completely washable.

To prevent the straps from falling completely to the floor while not in use, fasten each strap to itself as illustrated. This enables you to leave the straps attached to the side rails at all times.

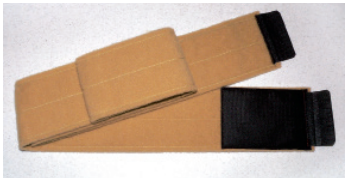
To secure the patient in position, simply pull the strap with Velcro loop side facing up first and then the hook side strap second. Easy, fast and comfortable for all.

Catalog #VIP-170



The straps come in a two piece set. Each piece is 6" wide and 30" long. Slip the proper end of each piece through each side rail and fasten with the Velcro closures. Position each strap as illustrated.

TILT TABLE STRAP



Specially designed tilt table strap is made of Velcro® brand loop material, double-faced and cushioned for patient comfort, with Velcro® brand hook material at each end of strap for greater control and adjustability. Can be washed and sterilized.

Size: 4" x 72" Color: Beige

Catalog #VIP-281045

IMPROVED TABLE STRAP

Extra strong table strap with more Velcro® to accommodate very small and extra large patients. Made of soft blue velour with 18˝ hook and 24˝ loop Velcro® restraint sewn on. Can be washed and sterilized.

Size: 6" x 82" Color: Blue

Catalog #VIP-156

TABLE STRAP

Strong, reliable, cushioned, and soft against the skin. For the patient, this strap is designed to ensure patient safety and comfort. For the therapist, it provides the greatest degree of adjustability and control. Made of soft blue velour with Velcro® brand loop. Can be washed and sterilized.

Size: 4" x 72" Color: Blue

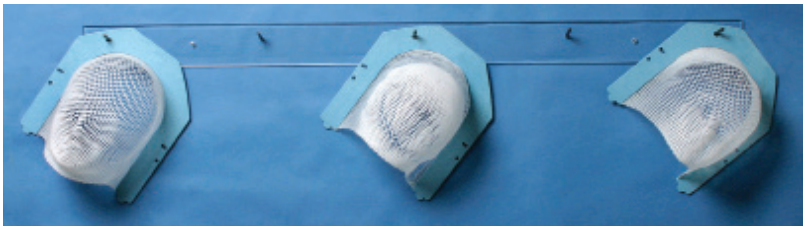
U-Frame Wall Hanger



A product that is made to help keep your patient molded U-Frames off of counter tops, etc. and mounted on your treatment room wall in an organized manner.

The unit has five 1½" pegs for U-Frame hangings, spaced 11" apart. Three drilled wall mounting holes. Overall dimensions: 3" H x 48" W x 3/8". Clear acrylic plastic.

Catalog #VIP-94 U-Frame Wall Hanger

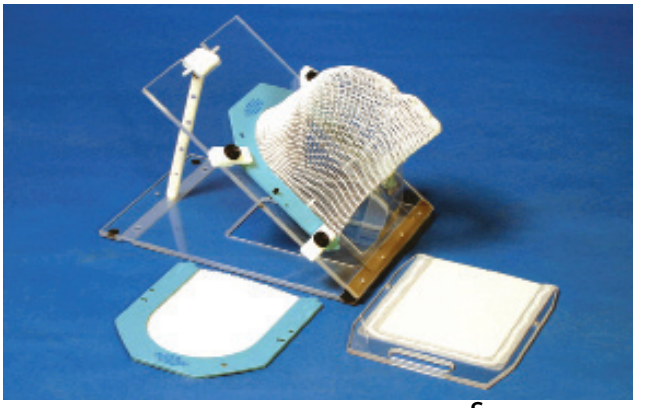
U-Frame Immobilization System

Product Features:

Minimal time needed for immobilization patient set-up technique, and can be utilized by one person n Reproduction patient set-up positioning for day-to-day treatments n Patient multiple positioning, 0° (flat) to 38.5° (flexion) using the 0 ring on the angle rod Two (2) openings, 5.25" x 9". One in the base and one in the angle to accommodate through the table technique n Base plate has non-skid tabs n U-Frames available as resusable or disposable n Uses standard Silverman plastic head and neck supports
Can accommodate the use of Timo head and neck supports by simply glueing to additional templates
Entire unit can be utilized in CT and MRI diagnostic units for verification of treatment set-ups due to all acrylic/plastic material

This is a dedicated system for patients undergoing external radiation treatments of the head and neck region. The system uses a perforated thermoplastic molding material. It's safe and easy to use when softened in temperature controlled water, and can be silicone sealed using polycarbonate plastic reusable frames. With no preparation to be done to the patient, the U-Frame can easily be draped over the patient's face and secured by four (4) quick release clamps. Alignment pegs are seated for precision repositioning, and the thermoplastic molding material can be shaped to conform to treatment adaptation and patient comfort.

Added feature: The APHS-1 and the APHS-2 have a milled-out area in the superior portion of each unit. This milled-out area can be seated onto the Exact Bar of the Varian Accelerator Exact Couch

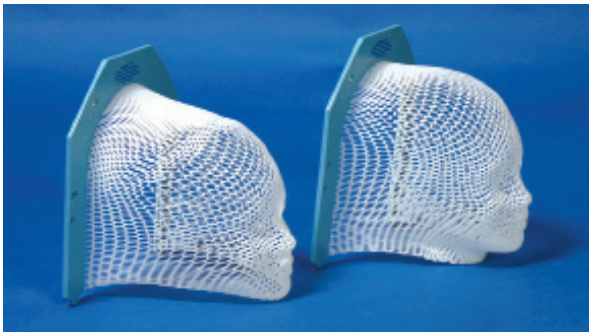


APHS- 2 Unit

If you prefer to use disposable U-Frames, you'll like the VIP 1764s. Although the size states 8" x 9", it refers to only the back side of the frame. The patient coverage remains the same. The look is different because of the rounded upper corners, made special for VIP. We have drilled two additional peg seating holes 2.7 cms above the regular peg seating hole. This "extra" hole will allow positioning the mold close to the apex of the head plus additional coverage below the chin. See the photo below.

Package #2 (disposable)

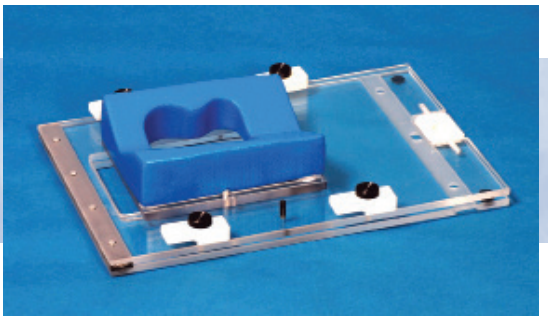
System includes: one base unit, one template (for head rest alignment and thermoplastic shrinkage if needed), one angle rod with "0" ring for flexion angle setting, three disposable U-Frames (Catalog #VIP-1764 DUF-3) with perforated thermoplastic sheets.



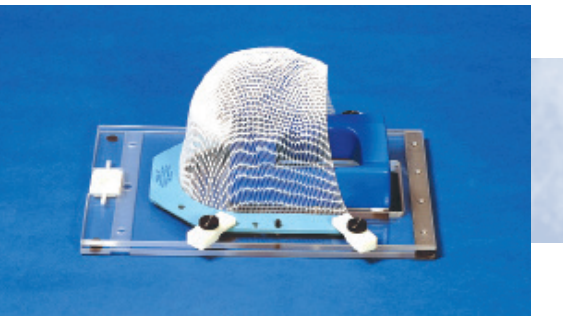
Package #1 (reusable)

System includes: one base unit, one template (for head rest alignment and thermoplastic shrinkage if needed), one angle rod with "0" ring for flexion angle setting, two reusable U-Frames with thermoplastic sheets, one scraper and one tube of silicone sealant. Outside dimensions: 12" x 18" x ¾".

Prone Positioning Accessory



Now available:
A soft foam vinyl covered prone positioner made to assist patients in a prone head position. Pad size: 8 ½" x 6 ½" x ½"



The pad is attached with Velcro to a ⅜" thick polycarbonate plastic frame with a cutout for the patient's face and two ¼" holes for securing onto the base plate. Safe and easily cleaned. Constructed for the APHS II Immobilization Unit, but may possibly be modified for other units. (CIVCO/MEDTEC, Inc.)

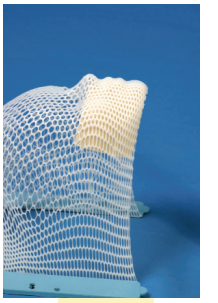
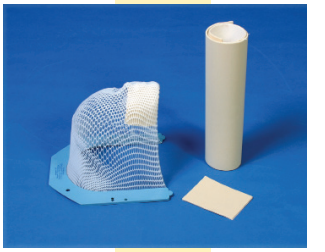
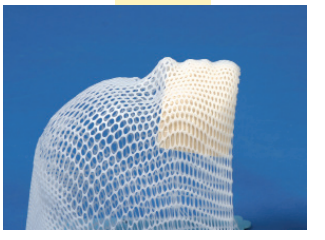
Soft Sponge and Molestick

Now your patients' rough spots can be soft spots when they have thermoplastic material (TM) formed over their body parts to produce immobilization. A patient immobilized under any TM can become very uncomfortable. This can be due to swelling, pressure points, sores or lacerations.

By placing a small piece of an adhesive sponge padding to your cured TM over these areas, a much softer point of pressure is created, giving you a much happier patient.







Molestick, an open-cell foam with an adhesive back, is available in a roll size 6" x 6 yds, 1/16" plus thickness that compresses under weight. May also be used on the plastic head supports to create "a feeling" of softness. Beige color.

Catalog #VIP-T4700 **Call for sample**

Soft Sponge, a closed-cell foam with an adhesive back which can be cleaned with soap and water is available in sheet size 18" x 23.5" x 1/8", 4 sheets/case. Beige color. Provides a more consistent "spacer," with your choice of either removing or not removing it. Helpful when you want to add to your head support due to shrinkage of the tumor, etc.

Catalog #VIP-T4445 **Call for sample**

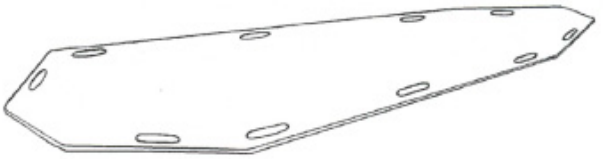
PATIENT TRANSFER BOARD

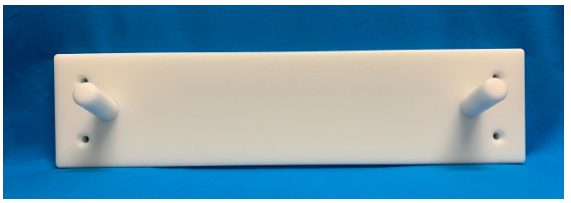


Designed to ease patient transfer from bed or stretcher to treatment table with minimum effort. Made of long lasting polyethylene material. Size: 72" x 22" x 1/4"

Catalog #VIP-40

Attention Buyers: This item is shipped flat. No waiting for it to uncurl before using!

ACRYLIC WALL RACK

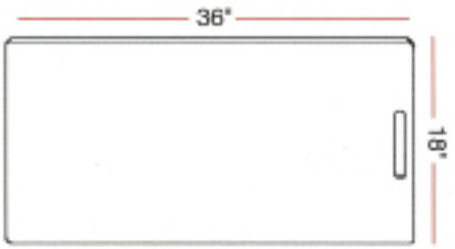


An excellent way to store your patient transfer board. Clear acrylic matches any color scheme.

Catalog #VIP-40-A 16"w x 4"h x ¾"d peg holes 12-13" apart

PLEASE NOTE: When purchasing a wall rack for a transfer board not manufactured by VIP, Inc., modification of wall rack may be necessary to match the holes on the board. A tracing of top portion of your board must accompany order. Add $10.00 to price of wall rack on these special orders.

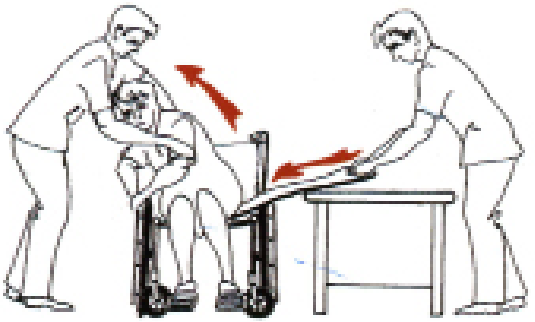
WHEELCHAIR PATIENT TRANSFER MOVER



If your wheelchair has arms that are removable, there is a way to help save your back from strain when moving a patient from wheelchair onto the treatment table and back to the wheelchair. The "mover" is made of polyethylene material and just flexible enough to bend over table corners and under the patient, yet strong enough to withstand heavy abuse. A nice item to have around!

Size: 36" x 18" x 1/4"

Catalog #VIP-131



ANTI-STATIC CLEANER

Use Staticide for maximum static electricity control.
Great for your patient transfer boards, as well as computers, glass, fabric, or plastic.
Non-toxic, non-flammable, biodegradable.
Long lasting, safe to use.

32 oz. Trigger Spray Bottle

Catalog #VIP-42

RADIATION THERAPY TABLE PADS

What Makes Our Pads Different?

- Minimizes beam contamination with the open Rx area
- Minimizes SSD drift as associated with solid pads
- Velcro-like bonding holds pads "in place"
- Easy to remove and return to desired position
- Easy to clean—washable vinyl
- Standard size 72"L x 18"W x 1" thick

Patients receiving radiation treatments have reason to complain of discomfort due to the hard surface of the treatment table. In severe cases, this could even cause treatment error due to patient motion during the course of treatment.

We recommend that the simulator and treatment table pads be identical due to set-up and treatment duplication, in addition to patient comfort.
